

## Abrasive Wheels Training

### Challenge

A client required 34 of their staff to be trained and certified competent on the Abrasive Wheels training course, on board their ship in Germany, during a day and night shift.

### Solution

3sun Academy sent over their instructor to their vessel and delivered three courses of training whilst it was in port. The trainer worked through both day and a night shift to work in with the shift pattern.

### Results

By delivering the training on-board the ship, the number of people trained was maximised. This reduced costs by having no downtime, and saving on candidate travel and accommodation costs.

### Maximising Our Value

3sun Academy were able to design and provide a cost effective training solution that helped achieve a value added service in order to maximise the effective use of the training budget.
